FACULTY NAME: Ms. JAYASHREE

CRICKET PLAYER PERFORMANCE TRACKING APPLICATION

CRICKETSTATS

PROJECT DOCUMENTATION

1. ABSTRACT

Cricket analytics plays an important role in improving team performance and strategic decision-making. This project, **"Cricket Player Performance Tracking Application – CRICKSTATS,"** focuses on developing a **Salesforce-based application** to manage and analyze cricket players' match performance data efficiently.

The system records detailed player statistics such as runs scored, wickets taken, matches played, and other performance metrics. Using Salesforce custom objects, relationships, reports, and dashboards, the application provides real-time insights into player performance.

The application replaces manual record keeping with a centralized cloud-based system that improves accuracy, accessibility, and analysis of cricket statistics. It helps coaches, team managers, and analysts evaluate players and make informed team selection decisions.

2. INTRODUCTION

2.1 Project Overview

CRICKSTATS is a Salesforce-based application designed to track and analyze cricket players' performance on a match-by-match basis.

The system uses Salesforce features such as:

- Custom Objects
- Relationships
- Automation (Flows)
- Reports and Dashboards

This application allows coaches, analysts, and team managers to record player statistics, monitor match performances, and generate analytical reports for better team management.

2.2 Purpose of the Project

The main purpose of this project is to:

- Digitize cricket player performance records
- Improve accuracy and accessibility of player statistics
- Provide real-time performance analytics
- Support player development and team planning
- Automate data management using Salesforce

3. PROBLEM STATEMENT

Cricket teams often store player statistics manually using notebooks, spreadsheets, or multiple files. This approach leads to several challenges such as inaccurate statistics, scattered data sources, and time-consuming record maintenance.

Coaches and analysts face difficulties in comparing player performances across matches, while team managers struggle to maintain updated records. Without a centralized system, analyzing performance trends and generating reports becomes inefficient.

Therefore, there is a need for a **centralized digital system** that can track player performance, maintain accurate records, and provide analytical insights to improve team management and decision-making.

4. IDEATION PHASE

4.1 Problem Analysis

User	Trying to Do	Problem	Reason	Feeling
Cricket Coach	Track player performance	Cannot access accurate statistics	Data stored in different formats	Frustrated
Team Manager	Maintain player records	Takes too much time	Manual data entry	Stressed
Sports Analyst	Analyze player trends	Hard to compare performance	No centralized system	Confused

4.2 Empathy Map Canvas – Target Users

Target Users

- Team Managers
- Coaches
- Sports Analysts
- Salesforce Administrators

Aspect	**Description**
Think & Feel	Need accurate player statistics
Hear	Feedback from team management
See	Multiple data sources
Say & Do	Collect match statistics manually
Pain	Data errors and delays
Gain	Automated analysis and reports

4.3 Brainstorming Considered Solutions

Possible solutions considered:

- Web-based player management system
- Mobile cricket statistics tracker
- AI-based performance prediction system
- Salesforce-based analytics system

Selected Solution:
Salesforce-based performance tracking system (**CRICKSTATS**)

Reason for Selection

- Cloud-based system
- Strong data management capabilities
- Built-in reports and dashboards
- Automation features

5. REQUIREMENT ANALYSIS PHASE

5.1 User Journey Stages:

01.Login

02.Enter Player Data

03.Record Match Performance

04.Generate Reports

05.Analyze Results

06.Decision Making

5.2 Solution Requirements

Functional Requirements

FR No	Description
FR-1	Player Registration
FR-2	Match Performance Entry
FR-3	Dashboard Generation
FR-4	Report Creation
FR-5	Flow Automation

Non-Functional Requirements

- Usability
- Security
- Reliability
- Performance
- Availability
- Scalability

5.3 Data Flow Diagram

User → Salesforce Interface → Custom Objects → Validation Rules → Flows → Reports → Dashboards

6. PROJECT DESIGN PHASE

6.1 Problem–Solution Fit

The CRICKSTATS system automates player performance tracking, eliminates manual record keeping, and enables real-time analytics of cricket statistics.

It helps coaches and analysts quickly evaluate player performance and make informed decisions.

6.2 Proposed Solution

Key features implemented:

- Secure Salesforce login
- Player custom object
- Match Performance custom object
- Relationship between players and match records
- Validation rules
- Automation using flows
- Reports and dashboards

6.3 Solution Architecture

Architecture Layers:

Presentation Layer - Salesforce Lightning Interface

Application Layer - Flows and Automation

Data Layer - Custom Objects (Player & Match Performance)

Analytics Layer - Reports and Dashboards

7. PROJECT PLANNING & SCHEDULING

7.1 Development Approach

The project was developed using an Agile-based approach.

Steps followed:

Requirement analysis

Object design

Development in Salesforce

Testing and validation

Report and dashboard creation

8. PROJECT DEVELOPMENT PHASE

8.1 Project Flow (Milestones)

- Developer Account Creation
- Custom Object Creation
- Tabs Creation
- Lightning App Creation
- Fields and Relationships
- Page Layout Design
- Validation Rules
- Flow Automation
- Reports and Dashboards

9. FUNCTIONAL & PERFORMANCE TESTING

During this phase, the system functionality and performance were tested in the **Salesforce Lightning interface.**

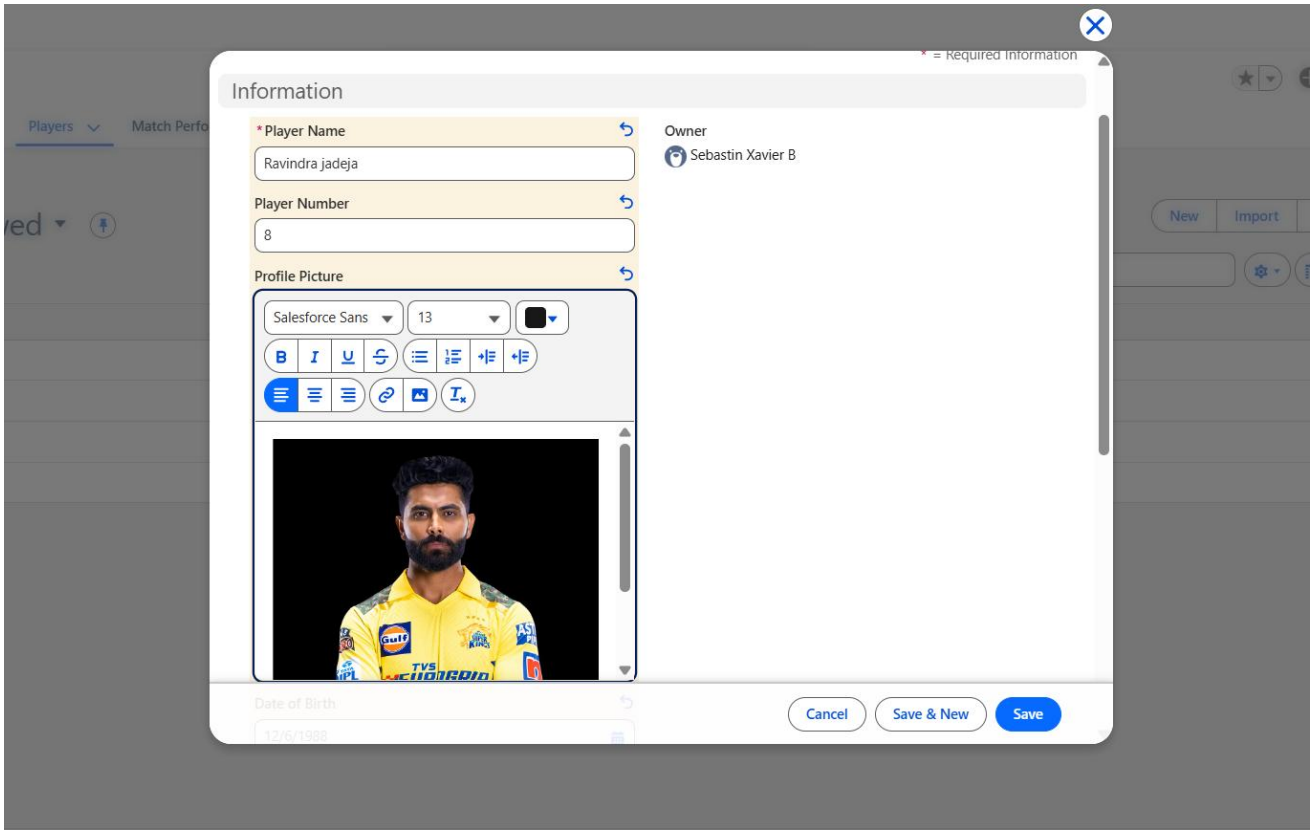
9.1 Functional Testing

The following features were tested:

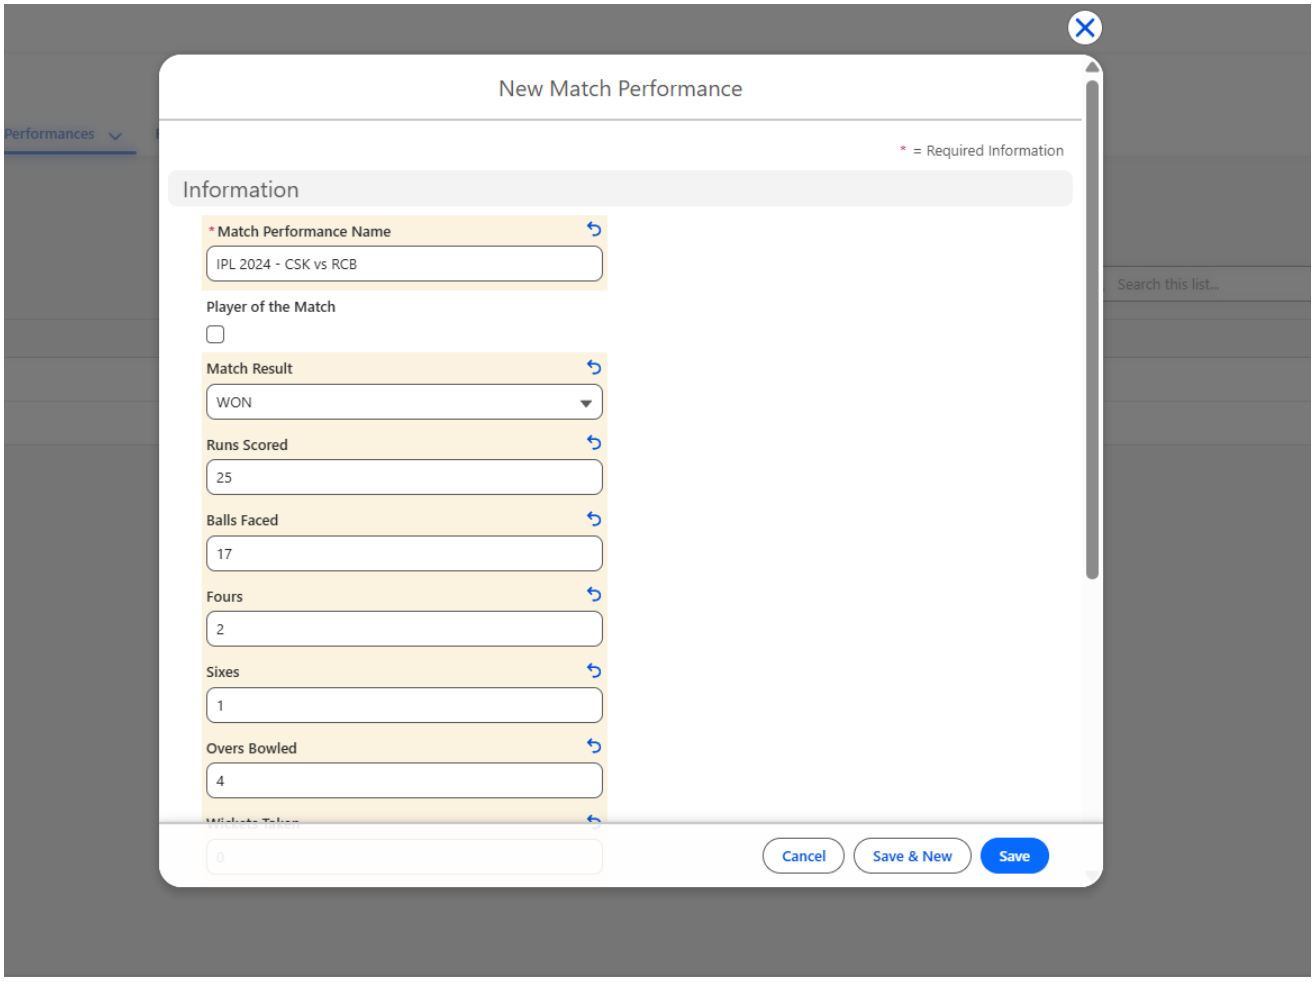
- Player record creation
- Match performance data entry
- Validation rules for data accuracy
- Flow automation execution
- Report generation
- Dashboard visualization

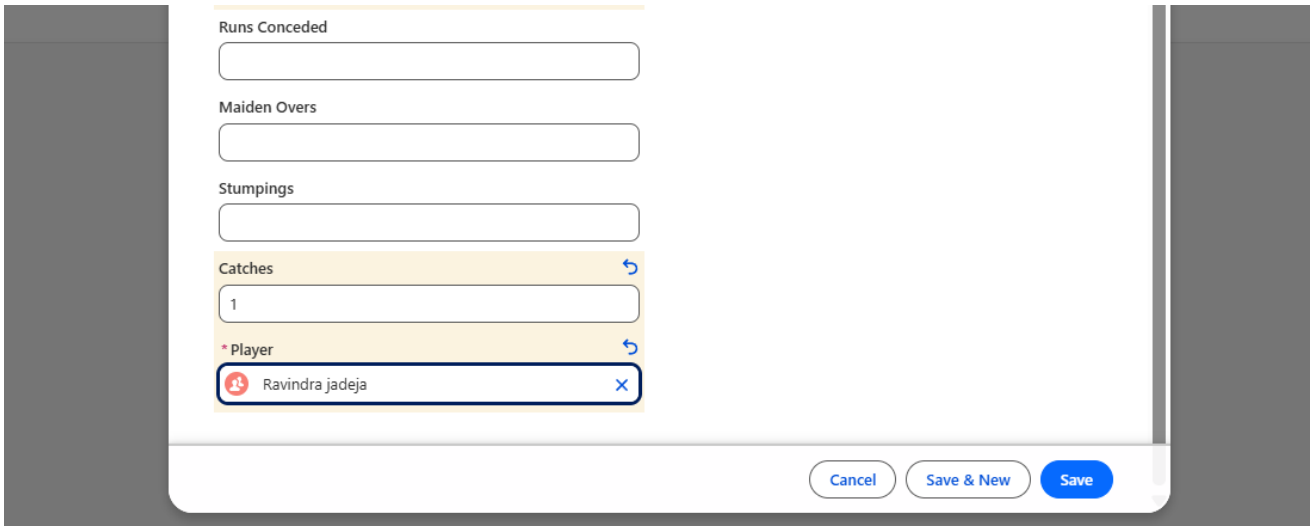
Screenshot Placeholders (Attach here):

- *Screenshot 1:* Player Record Creation

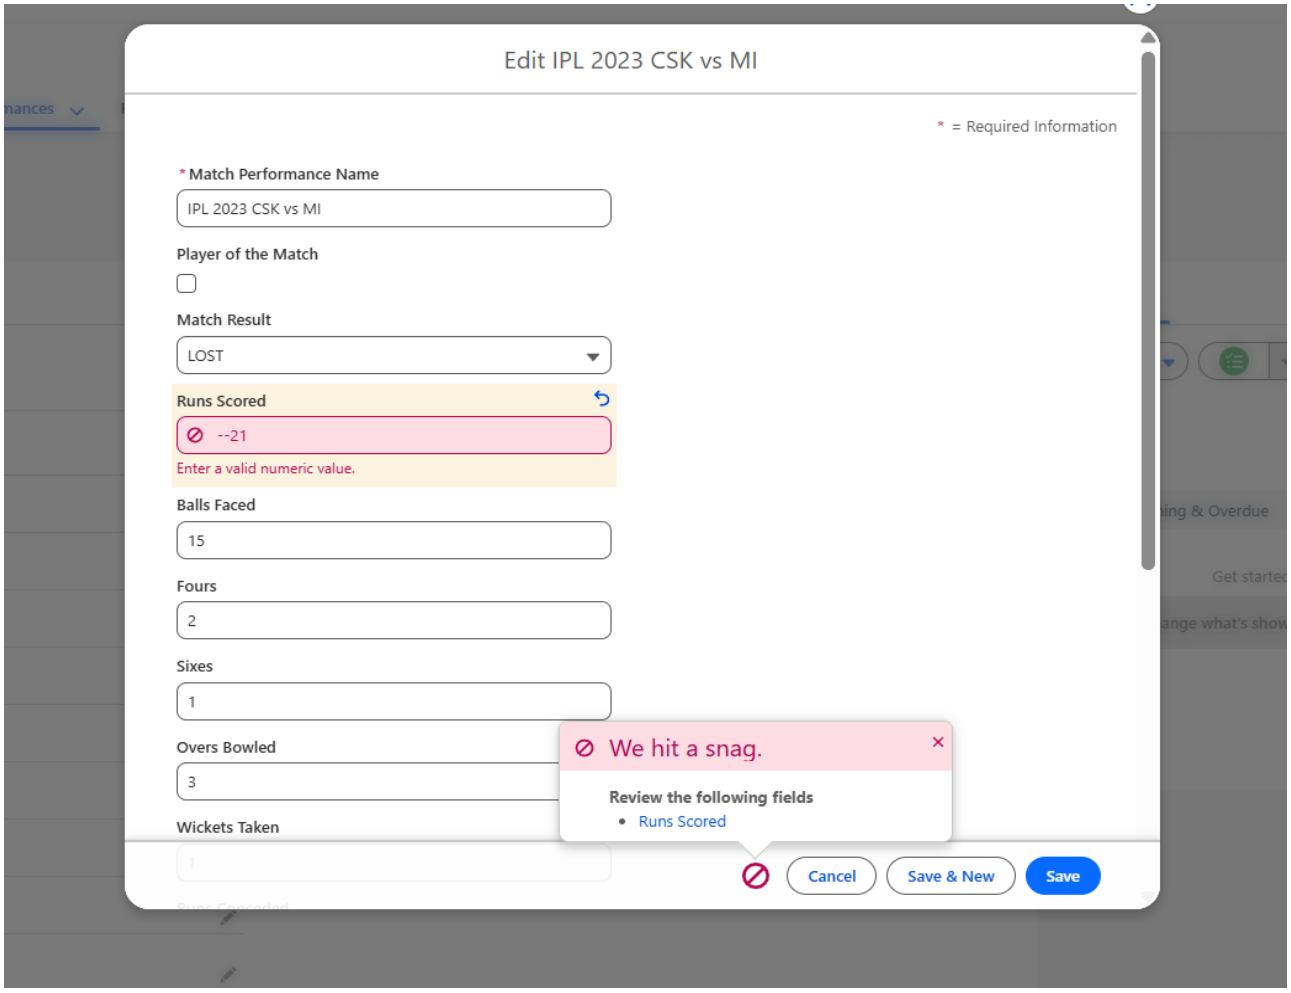


- *Screenshot 2:* Match Performance Entry





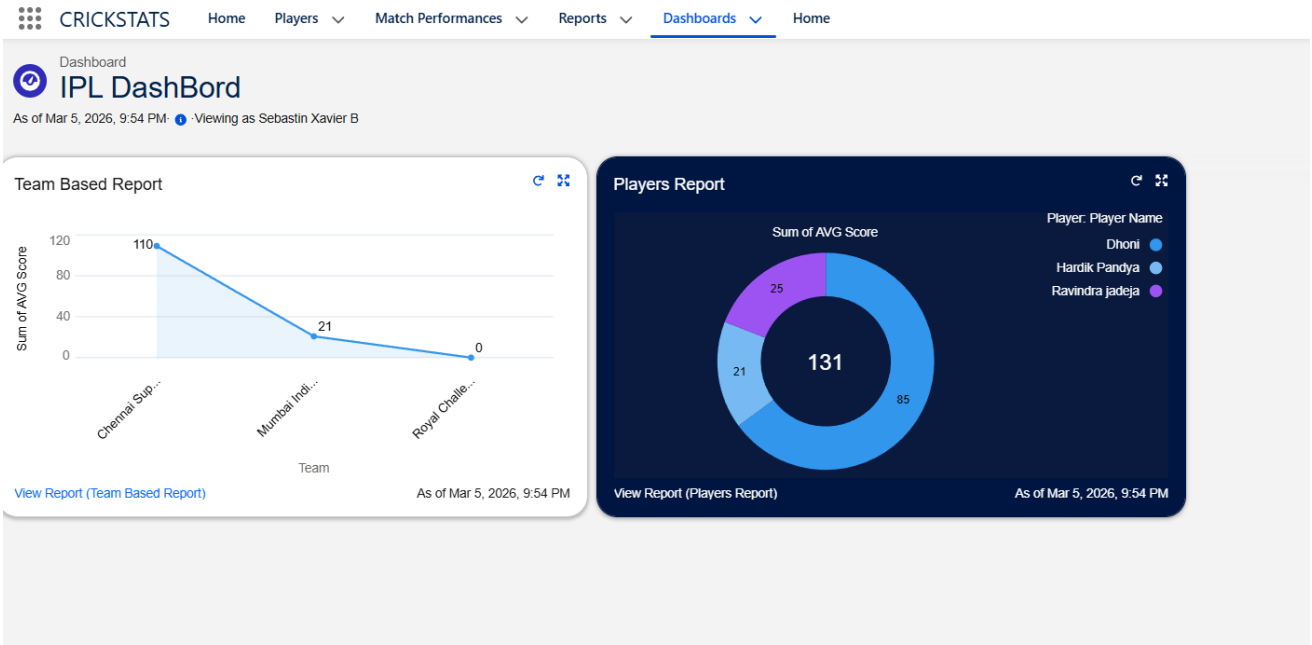
- *Screenshot 3:* Validation Rule Message



- *Screenshot 4:* Player Performance Re

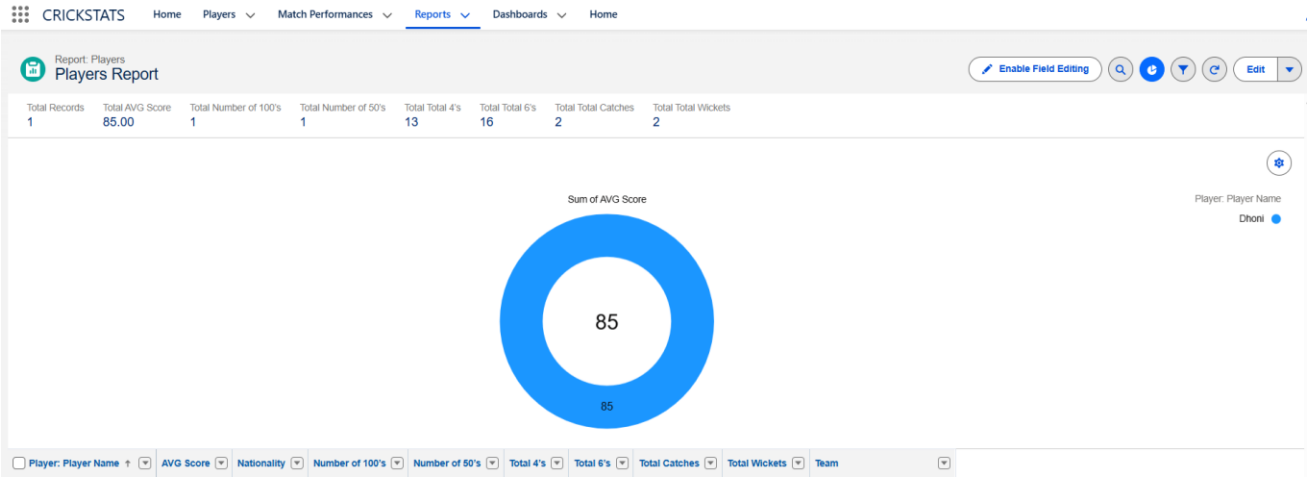
	Player: Player Name	AVG Score	Batting Style	Bowling Style	Number of 100's	Total Runs	Total Wickets
1	Rohit	0.00	Right- Handed	Right-Arm Spin	0	0	0
2	Virat Kohli	0.00	Right- Handed	Right-Arm Medium	0	0	0
3	Dhoni	85.00	Right- Handed	-	1	170	2
4	Hardik Pandya	21.00	Right- Handed	Right-Arm Medium	0	21	1
5	Ravindra jadeja	25.00	Left - Handed	Left-Arm Medium	0	25	0
6		131.00			1	216	3

- *Screenshot 5:* Dashboard View

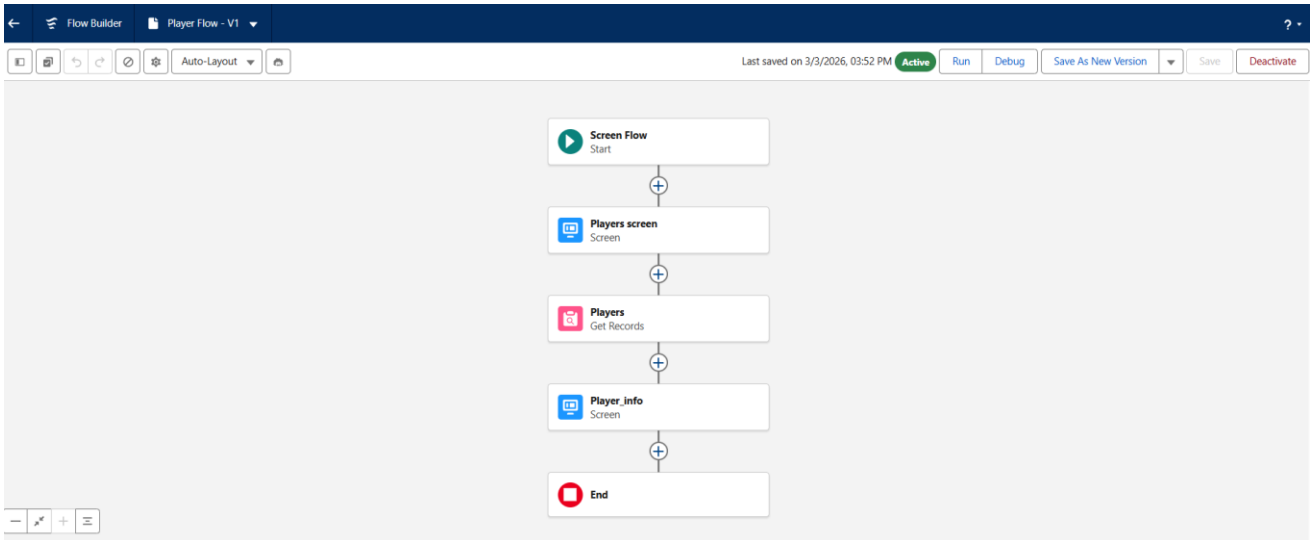


- *Screenshot 6:* Formula Field

- *Screenshot 7:* Player Report



- *Screenshot 8:* Player Flow Execution



9.2 Performance Testing

Performance testing verified:

- Fast system response
- Quick report generation
- Smooth dashboard loading
- Stable system performance with multiple records

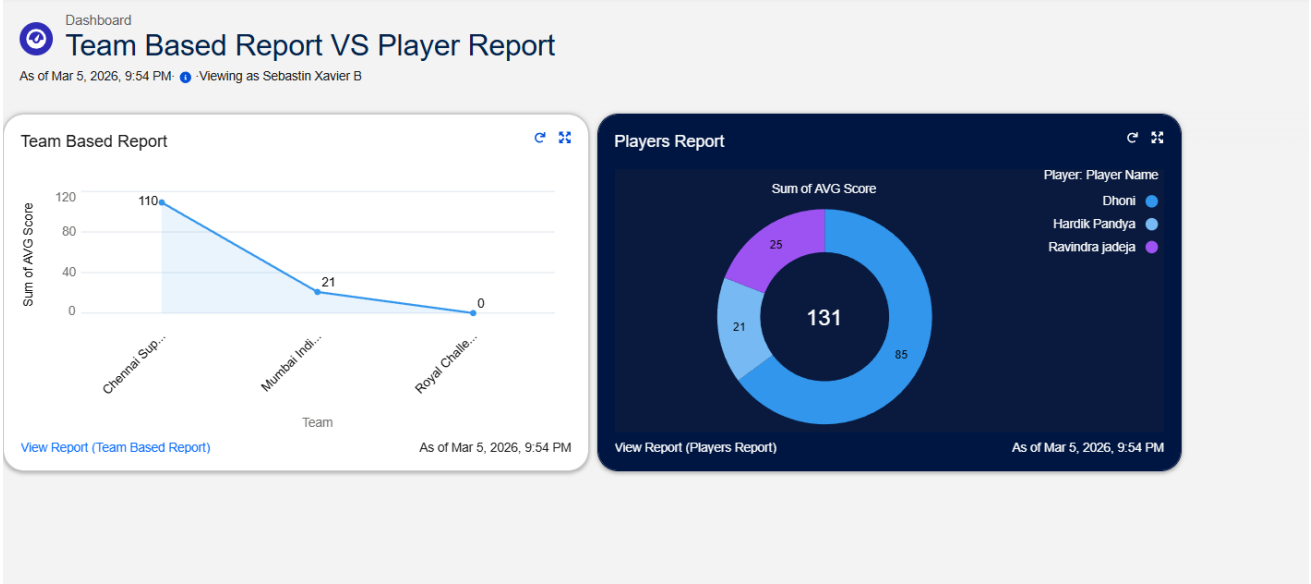
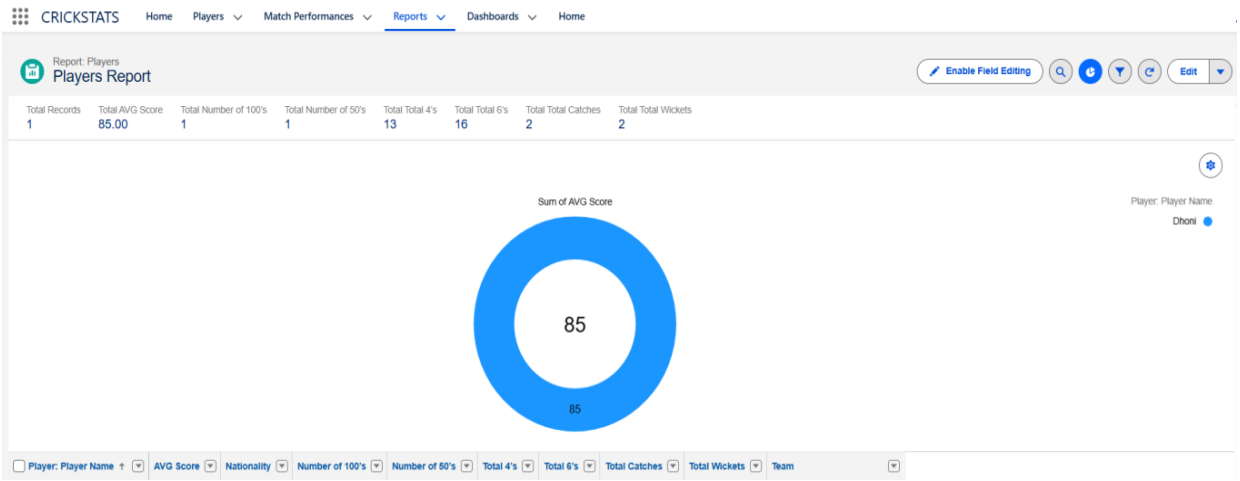
• Screenshot 9: Team Based Report / Player Report

Dashboard Performance



Report Load Performance



10. ADVANTAGES & DISADVANTAGES

Advantages

- Centralized player data management
- Accurate statistics tracking
- Automated reports and dashboards
- Improved decision making
- Cloud-based accessibility

Disadvantages

- Requires Salesforce platform access
- Internet dependency
- Limited offline functionality

11. SUMMARY OF THE PROJECT

The **CRICKSTATS – Cricket Player Performance Tracking Application** was developed using Salesforce to manage and analyze cricket player performance data efficiently.

The system uses custom objects, automation tools, and analytics features to record match statistics and generate meaningful reports. It improves data accuracy, reduces manual work, and helps team management make better decisions based on player performance.

Overall, the project demonstrates how a cloud-based platform like Salesforce can be used to build a powerful sports analytics system.

12. CONCLUSION

The **CRICKSTATS** application successfully digitizes the process of tracking cricket player performance by storing player data and match statistics in a centralized system. The application provides analytical insights through reports and dashboards, which help users easily analyze player performance and team statistics. By automating data entry, validation, and report generation, the system improves efficiency, accuracy, and reliability in managing cricket data. This application also supports better decision-making for coaches, managers, and analysts by providing real-time information and visual analytics. Overall, **CRICKSTATS** serves as a valuable tool for effective cricket team management and performance evaluation.

13. FUTURE SCOPE

Future improvements may include:

- Mobile application integration
- AI-based performance prediction
- Live match statistics tracking
- Team comparison analytics
- Integration with external sports data APIs

14. APPENDIX

- Salesforce Configuration
- Custom Objects and Fields
- Flow Automation Setup
- Reports and Dashboards
